High-Technology Diagnostic Imaging (HTDI) program

Blue Cross and Blue Shield of Minnesota and Blue Plus (Blue Cross) have entered a relationship with Nuance for the Institute of Clinical Systems Improvement (ICSI) sponsored HTDI automated decision support program. This change could impact the processes you currently follow regarding data submission and pre-certification/pre-authorization decision support services for HTDI.

Key process changes

Effective November 1, 2011, ordering providers are required to use a decision support system as part of their process for ordering elective, outpatient HTDI procedures. This can be performed either by Electronic Medical Record (EMR) integrated RadPort software or the web-based version. Those providers using other previously approved decision support systems may continue doing so.

This program applies to the following Blue Cross products:

- Blue Cross fully insured members
- A limited number of Blue Cross self-insured Minnesota members
- Blue Plus members enrolled in Minnesota Health Care Programs (MHCP)

All providers must continue to follow Medical and Behavioral Health Policies for selected HTDI procedures as summarized in the section below **both before and after November 1, 2011**.

For more information about the RadPort tool, and to schedule implementation, contact ICSI at **(952) 814-7067** or htdi@icsi.org.

Imaging procedures included in the automated decision support HTDI program

The new program covers the following elective, outpatient HTDI procedures:

- Computed tomography and angiography (CT/CTA) scans
- Positron emission tomography (PET scans)
- Magnetic resonance imaging and magnetic resonance angiography (MRI/MRA) scans
- Nuclear cardiology scans
- Combinations of PET, CT, MRI, etc.

Medical and behavioral health policies relating to HTDI (existing requirements)

Commercial Products:

All providers must continue to follow current pre-certification/pre-authorization and investigative policies in the Medical and Behavioral Health Policy Manual for commercial products. The following procedures have coverage criteria, are subject to medical review and continue to require the standard pre-certification/pre-authorization process:

- Computed tomography angiography (CTA) for evaluation of coronary arteries (retrospective claim review to determine if medical necessity criteria met)
- CT colonography (virtual colonoscopy) as a screening test for colorectal cancer (pre-certification/pre-authorization required)
- MRI of the breast (pre-certification/pre-authorization required EXCEPT in individuals with biopsy-proven breast cancer)
- Positron emission tomography (PET) (retrospective claim review to determine if medical necessity criteria met)

Minnesota Health Care Programs (MHCP):

All providers must continue to follow current prior authorization and investigative policies in the Medical and Behavioral Health Policy Manual for Minnesota Health Care Programs (MHCP) as defined in your Provider Service Agreement. The following procedures continue to require the standard pre-certification/pre-authorization process:

- MRI of the breast
- CT colonography (virtual colonoscopy) as a screening test for colorectal cancer
- Computed tomography angiography (CTA) for evaluation of coronary arteries, including coronary CT and EBCT for calcium scoring
- PET scans
- SPECT scans case-by-case review
- Capsule endoscopy

Non-covered procedures

These procedures are not covered for either commercial or Minnesota Health Care Programs (MHCP) members:

- Computed tomography (CT) screening for coronary artery disease
- Full-body CT scanning
- Spiral CT screening for lung cancer

Members covered by the program

To date, this program includes the following Blue Cross lines of business in the Minnesota service area and contiguous counties in Wisconsin, South Dakota, North Dakota and Iowa:

- Blue Cross fully insured members
- A limited number of Blue Cross self-insured Minnesota members
- Blue Plus members enrolled in Minnesota Health Care Programs (MHCP)

The HTDI program **does not** apply to any Medicare products or the Federal Employee Program.

The EMR integrated RadPort software or the web-based version will display the member's name if they are included under the HTDI program. (Blue Cross membership feeds to RadPort contain only members who are part of HTDI program, so if the member is not displayed in RadPort that member is not included.)

Contact information

For more information about pre-certification/pre-authorization and medical necessity requirements, etc., please contact provider services at **(651) 662-5200** or **1-800-262-0820**.

For more information about the HTDI program, go to **providers.bluecrossmn.com**.

For specific questions about Nuance's RadPort tool, or to schedule training and implementation of the tool, contact ICSI at **(952) 814-7067** or htdi@icsi.org.
