New Operating System – Sample Identification Card

On November 1, 2015, Blue Cross and Blue Shield of Minnesota (Blue Cross) will begin migrating subscribers from our legacy operating system to our new operating system. Subscriber migration will continue over the next few years with the goal of having all subscribers migrated to the new operating system by the end of 2018.

Subscribers who have migrated to the new operating system can be identified by a group number that is eight digits with no alpha character or dashes (an example is: 10051080). Subscribers who have not migrated to the new operating system will have a seven character group number consisting of alpha and numerical characters and a dash (an example is: AP009-HS).

Identification cards for subscribers on the new operating system will look different from cards for subscribers on Blue Cross's legacy operating system. An example of an ID card for each operating system is below for your reference.

ID card example for a subscriber on Blue Cross's **legacy operating system**:

BlueCross BlueShield			
Name		Group Number	AP009-HS
ELIZABETH DD SAMPLENA			
Identification #	Member #		
XZAXZ0000030	01		
Service Type	Medical, Rx	Care Type	Comp Major Med
