Preferred Genetic Laboratory Network

Blue Cross and Blue Shield of Minnesota and Blue Plus (Blue Cross) is partnering with Concert Genetics to implement a Preferred Genetic Laboratory network effective July 1, 2022. This Preferred Genetic Lab Network will consist of laboratories that meet high standards for quality and cost. Genetic laboratories that currently participate in our network will be receiving communication in the coming weeks that provides details on the program, including scoring criteria and program timelines. Once the Genetic laboratories have been assessed and selected for this network, additional communication will be distributed to all providers recommending the referral of genetic labs to this network of preferred labs to ensure that our members are receiving the highest quality care at an affordable price.
