Topical Lidocaine Prior Authorization with Quantity Limit Program Summary

This program applies to FlexRx Closed, FlexRx Open, FocusRx, GenRx Closed, GenRx Open, Health Insurance Marketplace, and KeyRx formularies.

This is a FlexRx Standard and GenRx Standard program.

The BCBS MN Step Therapy Supplement also applies to this program for all Commercial/HIM lines of business.

POLICY REVIEW CYCLE

Effective Date	Date of Origin
1/1/2024	10/1/2016

FDA APPROVED INDICATIONS AND DOSAGE

Agent(s)	FDA Indication(s)	Notes	Ref#
lidocaine topical jelly 2% Topical jelly*	Prevention and control of pain in procedures involving the male and female urethra, for topical treatment of painful urethritis, and as an anesthetic lubricant for endotracheal intubation (oral and nasal)	* generic available	7
lidocaine topical solution 4% Solution*	Topical anesthesia of accessible mucous membranes of the oral and nasal cavities and proximal portions of the digestive tract	* generic available	6
lidocaine topical ointment 5% Ointment*	• Anesthesia of accessible mucous membranes of the oropharynx • Anesthetic lubricant for intubation • Temporary relief of pain associated with minor burns, including sunburn, abrasions of the skin, and insect bites	* generic available	3
Lidoderm® (lidocaine patch 5%) Transdermal patch*	Relief of pain associated with post-herpetic neuralgia. It should be applied only to intact skin.	* generic available	1
Pliaglis® (lidocaine 7%/tetracaine 7% cream) Cream	Use on intact skin in adults to provide topical local analgesia for superficial dermatological procedures such as dermal filler injection, pulsed dye laser therapy, facial laser resurfacing, and laser-assisted tattoo removal		9
Synera®	Use on intact skin to provide local dermal analgesia for superficial venous access and superficial dermatological procedures such as excision, electrodessication, and shave biopsy of skin lesions		5

CLINICAL RATIONALE

Clinical Rationale	Moderate to severe cancer pain is treated with opioids; however, opioids alone may not provide optimal analgesia. When a specific cancer pain syndrome is suspected or documented, additional interventions may be targeted to that pain syndrome. Cancer-related neuropathic pain is common and can be related to the cancer itself or the acute or chronic effects of cancer treatment. Adjuvant analgesics (e.g., antidepressants, anticonvulsants, corticosteroids, topical anesthetic agents) are particularly important in treating neuropathic pain. Topical local anesthetic agents can be useful in preventing procedural pain and in relieving some types of cancer-related neuropathic pain. They act locally and are also thought to have some central inhibitory effect on pain. They may be used in combination with an opioid, antidepressant, and/or an anticonvulsant. Both the gel and patch forms of lidocaine have been shown to reduce the pain of postherpetic neuropathy and cancer-related pain.(2) Certain treatments for cancer can cause pain in the mouth, pharynx, and esophagus. Therapeutic approaches include cryotherapy, gabapentin in combination with opioid or non-opioid analgesics, and oral care protocols such as good oral hygiene and prophylactic mouth rinses. Local anesthetics may be used to treat mucositis either as component of a mouth rinse or separately in a topical solution or topical gel formulation.(2,11) Topical lidocaine products for use as a topical anesthetic are available over-the-counter. The 95th percentile weight for adult females aged 20 and over is 119.6 kilograms (kg) (263.8 pounds (lbs)) and 130.3 kg (287.2 lbs) for adult males aged 20 and over.(10)
Safety	The safety and effectiveness of lidocaine depend on proper dosage, correct technique, adequate precautions, and readiness for emergencies. The lowest dosage that results in effective anesthesia should be used to avoid high plasma levels and serious adverse effects. Repeated doses of lidocaine may cause significant increases in blood levels with each repeated dose because of slow accumulation of the drug or its metabolites.(1,3-7,9) When lidocaine patch is used concomitantly with other products containing local anesthetic agents, the amount absorbed from all formulations (additive effect) must be considered. All lidocaine topical products have a contraindication of known history of sensitivity to local anesthetics of the amide type, or to any other component of the product. Pliaglis and Synera have an additional contraindication of para-aminobenzoic acid (PABA) hypersensitivity.(1,3-7,9)

PRIOR AUTHORIZATION CLINICAL CRITERIA FOR APPROVAL

Module	Clinical Criteria for Approval
lidocaine topical jelly 2%	**lidocaine topical jelly 2%** will be approved when ALL of the following are met: 1. The requested agent will be used for ONE of the following indications: A. Prevention and control of pain in procedures involving the urethra **OR** B. Topical treatment of painful urethritis **OR** C. Anesthetic lubricant for endotracheal intubation (oral and nasal) **OR** D. Mucositis associated with cancer treatment **OR** E. BOTH of the following: 1. The patient has ONE of the following: A. Neuropathic pain associated with cancer pain or cancer treatment **OR** B. Another FDA approved indication for the requested agent and route of administration **OR** C. Another indication that is supported in compendia for the requested agent and route of administration **AND** 2. ONE of the following: A. The patient has tried and had an inadequate response to over-the-counter topical lidocaine **OR** B. The prescriber has provided information that indicates over-the-counter topical lidocaine is not clinically appropriate **OR** C. The patient is currently being treated with the requested agent as indicated by ALL of the following: 1. A statement by the prescriber that the patient is currently taking the requested agent **AND** 2. A statement by the prescriber that the patient is currently receiving a positive therapeutic outcome on requested agent **AND** 3. The prescriber states that a change in therapy is expected to be ineffective or cause harm **OR** D. The prescriber has provided documentation that over-the-counter topical lidocaine cannot be used due to a documented medical condition or comorbid condition that is likely to cause an adverse reaction, decrease ability of the patient to achieve or maintain reasonable functional ability in performing daily activities or cause physical or mental harm **AND** 2. The patient does NOT have any FDA labeled contraindications to the requested agent **Compendia Allowed:** AHFS, DrugDex 1 or 2a level of evidence, or NCCN 1 or 2a recommended use **Length of Approval:** 12 months NOTE: If Quantity Limit applies, please refer to Quantity Limit Criteria.
