

Topical Antifungals, itraconazole, terbinafine Prior Authorization with Quantity Limit Program Summary

This program applies to FlexRx Closed, FlexRx Open, GenRx Closed, GenRx Open, Health Insurance Marketplace and KeyRx formularies.

This is a FlexRx Standard and GenRx Standard program.

The BCBS MN Step Therapy Supplement also applies to this program for all Commercial/HIM lines of business.

POLICY REVIEW CYCLE

FDA APPROVED INDICATIONS AND DOSAGE

Agent(s)	FDA Indication(s)	Notes	Ref#
ciclopirox Topical solution	The treatment of onychomycosis of the toenail or fingernail (topical treatment in immunocompetent patients with mild to moderate onychomycosis without lunula involvement, due to <i>Trichophyton rubrum</i>)		3
Jublia® (efinaconazole) Topical solution	The topical treatment of onychomycosis of the toenail(s) due to <i>Trichophyton rubrum</i> and <i>Trichophyton mentagrophytes</i>		13
Kerydin® (tavaborole) Topical solution	The topical treatment of onychomycosis of the toenails due to <i>Trichophyton rubrum</i> or <i>Trichophyton mentagrophytes</i>	Available as a generic; designated target as determined by client	14
Sporanox® (itraconazole) Capsules Oral solution	The treatment of blastomycosis, histoplasmosis, aspergillosis, onychomycosis of the toenail or fingernail The treatment of oropharyngeal and esophageal candidiasis	Available as a generic; designated target as determined by client	1
terbinafine Tablets	The treatment of onychomycosis of the toenail or fingernail due to dermatophytes (tinea unguium)		2
Tolsura® (itraconazole) Capsules	The treatment of the following fungal infections in immunocompromised and non-immunocompromised adult patients: <ul style="list-style-type: none"> Blastomycosis, pulmonary and extrapulmonary Histoplasmosis, including chronic cavitary pulmonary disease and disseminated, non-meningeal histoplasmosis 		16

Agent(s)	FDA Indication(s)	Notes	Ref#
	<ul style="list-style-type: none"> Aspergillosis, pulmonary and extrapulmonary, in patients who are intolerant of or who are refractory to amphotericin B therapy. <p>Limitations of use: Tolsura is not indicated for the treatment of onychomycosis. Tolsura is not interchangeable or substitutable with other itraconazole products</p>		

See package insert for FDA prescribing information: <https://dailymed.nlm.nih.gov/dailymed/index.cfm>

CLINICAL RATIONALE

Esophageal candidiasis and candidemia	<p>Infectious Diseases Society of America (IDSA) guidelines recommend fluconazole as the first line oral therapy for esophageal candidiasis and candidemia in nonneutropenic patients. Fluconazole is also recommended for prophylaxis against esophageal candidiasis in at risk patients. For patients with fluconazole-refractory disease, guidelines recommend itraconazole or voriconazole. Voriconazole has demonstrated effectiveness for both mucosal and invasive candidiasis, but offers little advantage over fluconazole as initial therapy. Its clinical use has been primarily for step-down oral therapy in patients with infection due to <i>C. krusei</i> and fluconazole-resistant, voriconazole-susceptible <i>C. glabrata</i>.(4)</p>
Blastomycosis and histoplasmosis	<p>Itraconazole is the recommended therapy for the treatment of chronic cavity pulmonary histoplasmosis. Other forms of histoplasmosis are generally treated with amphotericin B.(5) IDSA guidelines recommend itraconazole as the first line oral agent for the treatment of mild to moderate blastomycosis. Itraconazole is also recommended in patients as a step down from amphotericin B for more severe cases of blastomycosis. Fluconazole and voriconazole are considered alternatives for the treatment of blastomycosis.(6)</p>
Onychomycosis (Tinea unguium)	<p>Onychomycosis typically causes no symptoms other than an undesirable appearance of the nail. Guidelines recommend consideration of treatment if walking is uncomfortable, abnormal looking nails are causing significant psychological distress, or if the patient has diabetes, vascular disease, or a connective tissue disorder. Treatment may be necessary if the nail infection is the source of a fungal skin infection or if the person is, or may become, severely immunocompromised.(11)</p> <p>Onychomycosis can be difficult to distinguish from other causes of nail dystrophy and because of slow nail growth (six months for fingernails and twelve months for toenails) evidence of treatment failure may not be apparent for several months or more. If the diagnosis is not confirmed and improvement does not occur, it is impossible to ascertain if treatment failure has occurred or if the initial diagnosis was incorrect. Guidelines on the treatment of fungal and candidal infections of the nail recommend laboratory confirmation and nail specimens for diagnosis before initiation of treatment.(11)</p> <p>The British Association of Dermatologists guidelines for the management of onychomycosis recommends both itraconazole and terbinafine as first line treatments for dermatophyte onychomycosis and generally prefer terbinafine over itraconazole.(15) The American Academy of Family Physicians recommends terbinafine as first-line treatment for dermatophyte onychomycosis due to its tolerability, high cure rate, and low cost. A meta-analysis showed a mycotic cure rate of 76% for the use of terbinafine for systemic treatment of onychomycosis.(11) Several meta-analyses have found oral terbinafine more effective than oral itraconazole for onychomycosis.(7-10) The guidelines consider oral fluconazole as an alternative (off-label use).</p> <p>Topical agents are recommended for patients who cannot take oral antifungals and in those with less than 50% of the distal nail affected and no lunular involvement.(11) Ciclopirox is considered less effective than systemic therapy, but has no systemic side effects or drug interactions. Additionally, a comparative study</p>

	showed combination of ciclopirox and oral terbinafine had a higher mycotic cure rate and complete cure rate compared to terbinafine alone.(11) The prescribing information for ciclopirox indicates it is part of a comprehensive management program that includes removal of the unattached, infected nails as frequently as monthly, by a health care professional who has special competence in the diagnosis and treatment of nail disorders, including minor nail procedures.(3)
Safety	<p>Sporanox capsules, Sporanox solution and Tolsura all carry a black box warning against their administration for the treatment of onychomycosis in patients with evidence of ventricular dysfunction. Tolsura can cause or exacerbate congestive heart failure. If signs or symptoms of CHF occur or worsen during administration of Tolsura, reassess the benefit-risk of continuing treatment.(1,16,17)</p> <p>Terbinafine carries the following contraindication:</p> <ul style="list-style-type: none"> • Individuals with a history of allergic reaction to oral terbinafine because of the risk of anaphylaxis. <p>Ciclopirox carries the following contraindication:</p> <ul style="list-style-type: none"> • Contraindicated in individuals who have shown hypersensitivity to any of its components <p>Sporanox carries the following contraindication:</p> <ul style="list-style-type: none"> • Should not be administered for the treatment of onychomycosis in patients with evidence of ventricular dysfunction such as congestive heart failure (CHF) or a history of CHF. <p>Tolsura carries the following contraindications:</p> <ul style="list-style-type: none"> • Co-administration of certain drugs that either affect metabolism of itraconazole or whose metabolism is affected by itraconazole. • Hypersensitivity to itraconazole

PRIOR AUTHORIZATION CLINICAL CRITERIA FOR APPROVAL

Module	Clinical Criteria for Approval
Ciclopiro x Efinaco nazole Ta vaborole	<p>Jublia (efinaconazole), Kerydin (tavaborole), or ciclopirox will be approved when ALL of the following are met:</p> <ol style="list-style-type: none"> 1. The patient has a diagnosis of onychomycosis (tinea unguium) AND 2. The patient has ONE of the following: diabetes mellitus, peripheral vascular insufficiency, immune deficiency due to medical condition or treatment (e.g., cancer chemotherapy, HIV/AIDS, anti-rejection therapy post organ transplant), pain limiting normal activity, or secondary bacterial infection in the surrounding skin or systemic dermatosis with impaired skin integrity AND 3. Treatment of the patient's onychomycosis (tinea unguium) is medically necessary and not entirely for cosmetic reasons AND 4. The fungal nail infection is confirmed by laboratory testing (KOH preparation, fungal culture or nail biopsy) AND 5. ONE of the following: <ol style="list-style-type: none"> A. The patient has tried and had an inadequate response to an oral antifungal agent OR B. The patient has an intolerance or hypersensitivity to an oral antifungal agent OR C. The patient has an FDA labeled contraindication to ALL oral antifungal agents OR D. The prescriber has provided information that an oral antifungal agent is not clinically appropriate OR E. The patient is currently being treated with the requested agent as indicated by ALL of the following: <ol style="list-style-type: none"> 1. A statement by the prescriber that the patient is currently taking the requested agent AND 2. A statement by the prescriber that the patient is currently receiving a positive therapeutic outcome on requested agent AND 3. The prescriber states that a change in therapy is expected to be ineffective or cause harm OR F. The prescriber has provided documentation that ALL oral antifungal agents cannot be used due to a documented medical condition or comorbid condition that is likely to cause an adverse reaction, decrease ability of the patient to achieve or maintain reasonable functional ability in performing daily activities or cause physical or mental harm AND 6. If the requested agent is ciclopirox 8% topical solution; treatment will include removal of the unattached, infected nail(s) by an appropriate health care professional AND 7. If the requested agent is a brand agent, ONE of the following: <ol style="list-style-type: none"> A. The patient's medication history includes use of a generic antifungal onychomycosis agent (e.g., itraconazole, terbinafine, ciclopirox) in the past 999 days OR B. The patient has an intolerance or hypersensitivity to a generic antifungal onychomycosis agent OR C. The patient has an FDA labeled contraindication to ALL generic antifungal onychomycosis agents OR D. BOTH of the following:

Module	Clinical Criteria for Approval
	<ol style="list-style-type: none"> 1. The prescriber has stated that the patient has tried a generic antifungal onychomycosis agent AND 2. A generic antifungal onychomycosis agent was discontinued due to lack of effectiveness or an adverse event OR <p>E.
